PROFESSIONAL SUMMARY

AI Engineer, Backend Developer, Blockchain Developer, and Cloud Engineering trainee with expertise in AWS Development, DevOps, scalable backend systems, AI-powered automation, and cloud-native applications. Skilled in building Retrieval-Augmented Generation (RAG) systems, vector-search pipelines, blockchain solutions using Solidity and Chainlink CCIP, and secure cloud architectures using AWS services. Experienced with CI/CD automation, containerization, serverless computing, and high-performance backend API development with strong foundations in Linux, networking, and cloud security.

TECHNICAL SKILLS

Cloud & IaC	AWS, GCP, Terraform, CloudFormation, EC2, S3, IAM, VPC, CloudWatch
DevOps	GitHub Actions, Jenkins, Docker, Kubernetes, Ansible, CI/CD
Programming	Python, C, Bash, Solidity
AI & Backend	RAG, ChromaDB, Flask, REST APIs, Vector Search, MCP Architecture
Databases	MySQL, MongoDB, DynamoDB, Firebase Firestore, SQLite, Amazon RDS
OS & Networking	Linux Administration, VPN, Load Balancers, Cloud Security

INTERNSHIP

Technical Hub | AWS Development with DevOps (May 2025 – October 2025)

PROJECTS

Voice-Driven AWS Automation

- Built a voice-controlled AWS automation platform using Python (Boto3), reducing manual cloud operations by 40%.
- Automated EC2 lifecycle management and S3 workflows with real-time cloud monitoring.
- Integrated Together AI LLM with Web Speech API to improve command accuracy and execution speed.

Persistent-Memory AI Academic Advisor

- Developed an AI academic advisor using MCP architecture and ChromaDB, improving contextual memory retention by 90%.
- Implemented RAG-based semantic search over 10,000+ indexed records with sub-second retrieval speed.
- Reduced repeated query processing by 60% using SQLite-backed persistent memory pipelines.

Chainlink CCIP Cross-Chain NFT Bridge

- Built a secure cross-chain NFT bridge using Chainlink CCIP for seamless blockchain interoperability.
- Developed Solidity smart contracts ensuring 100% NFT metadata and ownership consistency during transfers.
- Reduced smart contract vulnerabilities by 70% through automated Foundry testing workflows.

AI SOC for AWS

- Built an AI-driven SOC on AWS using Bedrock, GuardDuty, Lambda, and DynamoDB for real-time threat analysis.
- Implemented AI-powered threat reasoning workflows, reducing incident response time by 65%.
- Automated serverless remediation pipelines to improve cloud threat detection across distributed workloads.

Offline Customer Support Chatbot with Ollama & Llama 3.2

- Developed an offline AI chatbot using Ollama and Llama 3.2 for privacy-focused customer support automation.
- Implemented zero-shot and one-shot prompt engineering techniques to improve response relevance and accuracy.
- Integrated local LLM inference workflows, eliminating external API dependency and reducing operational costs.

EDUCATION

- B.Tech – Computer Science Engineering | Aditya College of Engineering and Technology | CGPA: 8.5
- Intermediate (MPC) – Sri Chaitanya Junior College | 907/1000

CERTIFICATIONS

- AWS Certified Developer – Associate (DVA-C02)
- AWS Academy Graduate – Cloud Developing
- IBM Generative AI Engineering Professional Certificate
- Simplilearn - Skillup Blockchain Developer Training
- Google Cloud – Generative AI Leader Certification
- Google Cloud – Cloud Engineering Certificate
- Oracle Cloud Infrastructure Foundations Associate
- Oracle Solution Architect
- Oracle Multi-Cloud Engineer
- OCI DevOps Professional
- Cisco – Programming Essentials in C
